Projects

Student Management System LINK
Java

- Built a console-based Student Management System in **Java** implementing full **CRUD** operations (add, view, update, delete, search).
- Designed with **OOP principles** — encapsulation and modular class structure across model, logic, and execution layers.
- Implemented **file handling** for persistent storage, reading and writing student records to a local file so data survives across sessions.

Github Profile Finder LINK
HTML, Tailwind CSS, React

- Built a **React** application to search GitHub users and display profile stats and top repositories using the **GitHub REST API**.
- Implemented **async/await** API calls with loading and error state handling for invalid usernames.
- Developed reusable components with **props-based** data flow and deployed the application on **Vercel**.
